The objective of the risk control process is to endeavor to monitor and manage the various types of risks, including market risks, credit risks and operational risks, with a view to achieving the investment objective of the allocation plan.

The Fund is subject to the following risks:

a) Our target return / dividend range cannot be guaranteed and it should be clearly understood that the portfolio of the Allocation Plans is subject to market price fluctuations and other risks inherent in all such investments. The risks emanate from various factors that include, but are not limited to:

Equity Risk - Companies issue equities, or stocks, to help finance their operations and future growth. The Company's performance outlook, market activity and the larger economic picture influence the price of a stock. Usually when the economy is expanding, the outlook for many companies is good and the stock prices may rise and vice versa.

Government Regulation Risk - Government policies or regulations are more prevalent in some securities and financial instruments than in others. Funds that invest in such securities may be affected due to change in these regulations or policies, which directly or indirectly affect the structure of the security and/or in extreme cases a governmental or court order could restrain payment of capital, principal or income

Credit Risk - Credit risk is comprised of default risk; credit spread risk and downgrade risk. Each can have a negative impact on the value of the underlying CIS.

Default risk is the risk that the issuer will not be able to pay the Interest / Markup / principal obligation, either on time or at all.

Interest Rate Risk – A rise or decline in interest rates during the investment term may result in a change in return provided to the investors.

Country or Political Risk – The uncertainty of returns caused by the possibility of a major change in the political or economic environment of the country such as break down of law and order, war, natural disasters, etc. and any governmental actions or legislative changes.

Credit Spread Risk - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income and including money market instruments;

Price Risk - The price risk is defined as when the value of the Fund, due to its holdings in such securities rises and falls as a result of change in interest rates.

Liquidity Risk – Liquidity risk is the possibility of deterioration in the price of a security in the Fund when it is offered for sale in the secondary market.

Settlement Risk – At times, the Fund may encounter settlement risk in purchasing / investing and maturing / selling its investments which may affect the Fund's performance etc.

Reinvestment Rate Risk –In a declining interest/ markup rate economic environment, there is a risk that maturing securities or coupon payments will be reinvested at lower rates, which shall reduce the return of the Fund compared to return earned in the preceding quarters.

Events Risk - There may be adjustments to the performance of the Fund due to events including but not limited to, natural calamities, market disruptions, mergers, nationalization, insolvency and changes in tax law.

Redemption Risk - There may be special circumstances in which the redemption of Units may be suspended or the redemption payment may not occur within six working days of receiving a request for redemption from the investor

Performance Risks of Equity and Income Schemes – The performance of AIFPF would depend upon performance of the Equity Schemes and Income Schemes in which investments on account of Allocation Plans would be made.

Distribution Taxation Risk – Dividend distribution or Return of Capital to investors is liable to tax as per Income Ordinance 2001. The distributions are uniform across all units, therefore unit holders who invest in a fund before distribution of dividends may be liable to pay tax even though they may not have earned any gain on their investment.

Shari'ah non-compliance Risk - The risk associated with employing funds in investments that are not consistent with the Maqasid e Shari'ah.
