Market Review & Outlook

Fund Managers Report - February'16

From the CIO's Desk

Year-on-Year CPI inflation continues to remain on the lower side and clocked in at 4.0% for February 2016. International commodity prices have been subdued for the past few months, and are expected to remain weak in the near future due to expected slowdown in Chinese economy and weak growth prospects in mainstream economies of the world. Even though high base effect will gradually subside in CY'16, inflation is still expected to remain under control due to low commodity prices.

Last month State Bank of Pakistan decided to keep the Policy Rate unchanged at 6.0%. This was likely based on pressures in the foreign exchange market amid the maturity of a USD 500mn Eurobond in Mar-16. We feel that the interest rate cycle has bottomed out, and foresee the status-quo to be maintained for at least two quarters, on account of balance of payment considerations.

The KSE-100 Index was volatile in Feb-16, losing up to 2.3% at one point, before recovering to close at 31,370pts (0.2% MoM). This was in contrast to the MSCI FM index which exhibited a robust gain of 4.1% MoM. In addition to continued foreign selling and volatility in global equity markets, rumors pertaining to potential crackdown on certain industrialists and brokers dented the sentiment in the market. However, recovery in oil prices provided some support to the dampened sentiment. The pressure of foreign selling continued in the market with net outflow during Feb-16 clocking in at USD39.5mn, taking 8MFY16 total net outflow to USD330.0mn. On the local front, Individuals and companies absorbed the foreign outflows with net buying of USD 29.4mn and 17.9mn respectively.

However despite this short term volatility we have a positive outlook on the local equity market in medium-term. The low interest rates, higher GDP growth and strong corporate earnings growth is expected to fuel the equity market over the long-term. The fundamentals of the stock market are intact and the market is trading at a significant discount as compared to the regional peers. MSCI's probable reclassification of Pakistan into its Emerging market index, progress on China-Pakistan economic corridor and macroeconomic growth can lead to rerating of the market. Thus any corrections in the stock market should be viewed by long-term investors as opportunities to build stock market exposure. Low yields on fixed income securities and the positive outlook of the country's economy make it all the more important for investors to allocate a portion of their portfolios to equity.

UBL Asset Allocation Fund (UAAF) offers an appropriate strategy for such times of volatile equity markets for investors with low to moderate risk tolerance. This fund invests in a diversified portfolio of stocks, bonds, and money market instruments. It has the potential to earn returns well above those of Money Market Funds and Income Funds, while limiting risk by investing no more than 40% of its assets in stocks at any point in time.

We strongly recommend our investors to invest in Voluntary Pension Schemes in order to grow their long-term savings and achieve retirement security. We recommend a high exposure to Equity Sub-Fund of the Scheme. We have been following an aggressive investment strategy in this Sub-Fund considering its long time horizon and low liquidity/redemption pressures. The strategy has performed well and the Equity Sub-Fund has generated an absolute return of 405.7% (KSE-100 Index: 205.4%) since inception. This translates to an average annualized return of 32.2% p.a. (KSE-100 Index: 21.2% p.a.) - thus outperforming the KSE-100 Index by a huge margin.

Analysis

- Consumer Price Index (CPI) for Feb'16 clocked in at 4.02% YoY in line with market expectations and higher than the inflation of 3.3% reported in Jan'16. As expected, significant uptick in inflation was due to the low base effect. However, CPI Inflation declined by 0.25% MoM in Feb'16 against an increase of 0.21% during the previous month. In 8M FY'16, average CPI Inflation stood at 2.48%.
- Foreign exchange reserves has shown a slight improvement of USD ~39mn and reached at USD 20.33bn. Low oil prices coupled with remittances during the 7M FY'16 supported the current account deficit. The trade deficit stood at USD 10.87bn during the first seven months, which is slightly less than USD 10.98bn against the same period last year. The Foreign Direct Investment (FDI) reached at USD ~648 million representing 4.6% increase during the 7MFY'16 compared with same period last year.
- Despite the low base effect, the inflation has been lower than expected in recent months due to more than anticipated decline in food prices. In the backdrop of low POL prices and modest recovery in food prices, inflation is not anticipated as a concern in the short-term. Estimates suggest that CPI shall be down, as low as -0.20% to -0.30% on MoM basis in Mar'16, which will translate into a CPI reading of 3.4%-3.6% on YoY basis. Thus it is expected that inflation will remain within target for FY16.

KSE-100 Index	-8.81%	-4.41%			
USF	-1.35%	-7.12%			
KMI-30	-6.14%	-3.33%			
ASSF	-4.31%	-5.93%			

Analysis

- The benchmark KSE-100 index remained volatile during Feb'16, increasing by a mere 0.23% MoM, translating into CYTD loss of 4.41% (FYTD loss: 8.81%). Market remained range bound mainly on account of worsening global economy as well as increasing regulatory oversight on the domestic front.
- Decent corporate results failed to provide stimulus to the market, which remained subdued on the back of foreign outflows. FIPI continued its negative streak, recording a net outflow of USD ~40mn during the month, taking FYTD net foreign selling to USD ~332mn.
- Selected foreign buying was seen in cements, technology and communication, while sectors not favored by foreign investors included banks (due to low interest rate environment), E&Ps (due to falling international oil prices), and fertilizers (due to volatility in international urea prices). Major developments during the month included IMF approving release of the 11th tranche of USD 497mn, signing of USD 16bn LNG deal with Qatar, shrinking of the current account deficit to USD 2bn.
- Going forward, the market is expected to remain range bound in the short-term due to the absence of any major catalysts. However, a surprise cut in the discount rate in the upcoming MPS on the back of lower inflation expectations resulting from a cut in POL prices may stimulate local investor sentiment. Long-term stimulants to the market include implementation of the CPEC project, as well as potential reclassification of Pakistan as an emerging market after the Jun'16 MSCI review.

UBL Money Market Fund

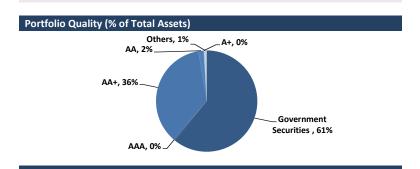

Fund Managers Report - February'16

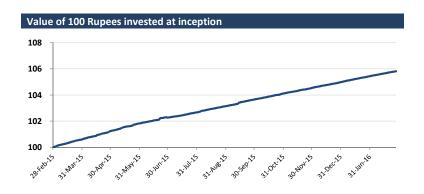

Investment Objective

The objective of UBL Money Market Fund is to generate competitive returns within a low risk portfolio to provide a regular stream of income and easy liquidity to its investors by investing more than 50% of the portfolio in short term government securities

Disclaimer: This publication is for informational purpose only and nothing herein should be construed as a solicitation, recommendation or an offer to buy or sell any fund. All investments in mutual funds are subject to market risks. The NAV based prices of units and any dividends/returns thereon are dependent on forces and factors affecting the capital markets. These may go up or down based on market conditions. Past performance is not necessarily indicative of future results. All returns are calculated assuming reinvested dividends.
