Coverage available: Equivalent to cumulative investment, with a ceiling of Rupees Five million (PKR 5,000,000/-). Note: note: Consult your tax advisor for more information.

## From the CIO's Desk

The benchmark KSE-100 Index posted a return of 2.2%MoM during January taking FY20TD cumulative return to ~23%. The positive performance was driven by improving comfort on the external account, encouraging developments in FATF negotiations and amicable settlement of army chief extension issue in the parliament. In a change of hands, local institutional investors emerged as major buyers while retail investors choose to book gains which somewhat dampened investor sentiment in the second half of the month. Corroborating above, market volumes and value traded also subsided after significantly picking up in the first half of the month.

The headline inflation for the month came at 14.6%YoY, significantly above market expectations of 13.0-14.0%. The above was mainly driven by higher than anticipated increase in house rent inflation and considerable jump in some non-perishable food item prices (sugar and wheat) during January due to administrative issues/supply shocks. Following above, the market now expects interest rates to remain unchanged for a longer period of time as reflected in an uptick in long-term yields in the last few days. We think that inflation has touched its peak and is likely to decline significantly over the next 6-8 months. The recent fall in global commodity prices due to softer demand outlook following spread of coronavirus gives us further confidence that inflationary pressures would subside going forward. We expect SBP to start monetary easing in 2HCY20.

The external account position continues to remain comfortable due to a contained current account position and rising foreign inflows in local sovereign debt market. The current account deficit during 1HFY20 shrank by 75%YoY from USD8.6bn to USD2.1bn mainly due to hefty decline in trade deficit by 37%YoY. Moreover, during the same period, the overall balance of payments position posted a surplus of USD4.3bn on account of healthy financial flows. We expect the aforesaid trend to continue in 2HFY20 as well with healthy financial flows adequately funding the gap on current account.

In the coming weeks, the market will take direction from upcoming FATF negotiations in mid-February, outcome of second IMF review where Pakistan has already met all quantitative benchmarks for the second quarter, developments in negotiations between the ruling party and its coalition partners, current earnings season and weekly inflation readings and short-term movement in money market yields.

From a fundamental perspective, notwithstanding any short-term hiccups, the equity market holds a huge potential as earnings yield differential from 10Y PIB yield is 3.1% (14.2% vs 11.17%) which is still much higher than the average yield differential of 0.7% over the last 10 years. Further, corporate earnings are expected to witness a double-digit growth in CY20 and CY21.

We recommend our investors to invest in our equity funds as per their risk appetite and return expectations. For instance, our Al-Ameen Islamic Asset Allocation Fund (AIAAF) offers an appropriate strategy for investors with low to moderate risk tolerance. This fund invests in a diversified portfolio of stocks, bonds, and money market instruments. It has the potential to earn returns well above those on offer in Money Market and Income Funds, while limiting risk by investing no more than 40% of its assets in stocks at any point in time. For those with higher risk tolerance and return expectations, we have Al-Ameen Shariah Stock Fund, which offers pure exposure to the domestic equity market.

We strongly recommend our investors to also invest in our Voluntary Pension Scheme (Al-Ameen Islamic Retirement Savings Fund) in order to avail tax benefits, grow their long-term savings and achieve retirement security. For those with a longer investment horizon, we recommend a high exposure to Equity Sub-Fund of the Scheme. We have been following an aggressive investment strategy in this Sub-Fund considering its long time horizon and low liquidity/redemption pressures. The strategy has performed well and the Equity Sub-Fund has generated an absolute return of 556.11% (KMI-30 Index: 331.27% since inception). This translates to an average annualized return of 21.31% p.a. (KMI-30 Index: 16.20% p.a.) - thus outperforming the KSE-100 Index by a significant margin.
