- **Credit Risk** - Credit Risk comprises Default Risk and Credit Spread Risk. Each can

have negative impact on the value of the income and money market instruments

- **Default Risk** - The risk that the issuer of the security will not be able to pay the obligation, either on time or at all;
 - **Credit Spread Risk** - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income and including money market instruments;
- (2) **Price Risk** - The price risk is defined as when the value of the Fund, due to its holdings in such securities rises and falls as a result of change in interest rates.
 - (3) **Liquidity Risk** – Liquidity risk is the possibility of deterioration in the price of a security in the Fund when it is offered for sale in the secondary market.
 - (4) **Settlement Risk** – At times, the Fund may encounter settlement risk in purchasing / investing and maturing / selling its investments which may affect the Fund's performance etc.
 - (5) **Reinvestment Rate Risk** – In a declining interest/ markup rate economic environment, there is a risk that maturing securities or coupon payments will be reinvested at lower rates, which shall reduce the return of the Fund compared to return earned in the preceding quarters.
 - (6) **Events Risk** - There may be adjustments to the performance of the Fund due to events including but not limited to, natural calamities, market disruptions, mergers, nationalization, insolvency and changes in tax law.
 - (7) **Redemption Risk** - There may be special circumstances in which the redemption of Units may be suspended or the redemption payment may not occur within six working days of receiving a request for redemption from the investor.
 - (8) **Investor Concentration Risk** - The Risk that the performance and liquidity of the Portfolio is adversely impacted due to a few large investors investing-in or redeeming from the fund over a short-time period. Factors contributing to such an adverse impact may include, but are not limited to, deviations in portfolio allocation, price impact of portfolio rebalancing, higher allocations in illiquid scripts etc.
 - (9) **Distribution Taxation Risk** – Dividend distribution or Return of Capital to investors is liable to tax as per Income Ordinance 2001. The distributions are uniform across all units; therefore unit holders who invest in a fund before distribution of dividends may be liable to pay tax even though they may not have earned any gain on their investment.
