Each Participant will select any one of the approved Allocation Schemes as provided in clause 6.6, for allocation of their contributions between the Sub-Funds. Thus Contributions from the Participants will be allocated between the Sub-Funds in accordance with the particular Allocation Scheme selected by the Participants.

8.13 Risk Disclosure

All investments in the Pension Fund are subject to market risks. The value of such investments may depreciate as well as appreciate, subject to market fluctuations and risks inherent in all such investments. Investors should read this Offering Document carefully to understand the investment policies, risks and tax implications and should consult their legal, financial or tax advisors before making any investment decision. As per the Voluntary Pension System Rules, 2005 and the Income Tax Ordinance, 2001, withdrawals from the Pension Fund before the retirement age are subject to tax.

The Pension Fund will be investing in equity securities listed on the Stock Exchanges and also in fixed income securities including deposits with Banks. Such investments are subject to varying degree of

⁶ Amended as per 6th SOD effective from April 6, 2021

risks that include, but are not limited to:

8.8.1 Business Risk

This is the uncertainty of income flows caused by the nature of a firm's business. It includes: (i) changes in business cycles affecting the business of the company in which the investment is made; (ii) changes in business circumstances of the company, its business sector, industry and/or the economy in general; and (iii) mismanagement of the investee company, third party liability through class action or occurrence of other events such as strikes, fraud etc., in the company in which the investment was made.

8.8.2 Equity Risk

Investment in equity securities are subject to price risk, which is dependent on a multiple of factors, including the profitability/ performance of investee companies, technological development, which may render the processes of investee companies obsolete, government regulations, economic and political situation within the country, region and internationally. As a result of these factors, the dividend income and the share price of equity securities may go up as well as down.

8.8.3 Volatility in Market Price Risk

Volatility in prices resulting from their dependence on market sentiment, speculative activity, supply and demand for the securities and liquidity in the market. The volatility in securities prices results in volatility in the NAV based price of the Unit.

8.8.4 Liquidity Risk

Some securities listed at the Stock Exchanges are illiquid and difficult to sell. Liquidity Risk is the uncertainty introduced by the secondary market for an investment and assesses: 1) how long it takes to convert the investment into cash and 2) how certain is the price to be received. It is affected by:

- i. volatility in shares prices resulting from their dependence on market sentiment, speculative activity, supply and demand for the shares and the liquidity in the market; and
- ii. increase in lending rates as a result of a change in the supply and demand of liquidity in the market or on account of an increase of the underlying inflation rate.

8.8.5 Credit Risk

This includes default risk, credit spread risk, and down grade risk. These risks are associated with fixed income securities. Default risk will involve possibility of non-payment of mark up or principal. Credit spread risk will involve increase in difference of mark-up rate of an issuer and Government Securities. Such increase is due to macro-economic factors in local as well as global markets. Increase in spread will result in decrease in value of fixed income securities. Down grade risk means lower rating by credit rating agencies and will result in decrease in value of fixed income securities.

8.8.6 Financial Leverage Risk

This is the uncertainty induced by the method by which the firm finances its investments. If a firm borrows money to finance investments, it must pay fixed financing charges (in the form of interest to creditors) prior to providing income to the common stockholders. This risk includes: (i) senior rights of creditors over shareholders of the company in the event of winding up; (ii) the inability of the issuer of the instrument, the relevant financial institution or the counter party in the case of a reverse purchase or other arrangements to fulfill their obligations; and (iii) the possibility of defaults by participants or failure of Stock Exchanges, the depositories, the settlement or clearing system.

8.8.7 Interest Rate Risk

This arises due to increase in lending rates as a result of a change in the supply and demand of liquidity in the market or on account of an increase in the underlying inflation rate. An increase in the interest rates will result in decrease in value of fixed income securities, including Government Securities.

8.8.8 Country or Political Risk

This is the uncertainty of returns caused by the possibility of a major change in the political or economic environment of the country such as break down of law and order, war, natural disasters, etc. and any governmental actions, legislative changes or court orders restraining payment of principal or income.

8.8.9 Purchasing Power Risk

This is the risk of loss in the value of capital due to inflation.

8.8.10 Inflation Risk

This is the possibility that the value of assets or income will decrease as inflation shrinks the purchasing power of a currency. Inflation causes money to decrease in value at some rate, and does so whether the money is invested or not. It is the risk associated with the return from an investment not covering the loss in purchasing power caused by inflation.

Capital invested in the stock market could, in extreme circumstances, lose its entire value.

However, studies show that diversification of the investment reduces the risk associated with investing in the stock market.

Disclaimer

The investments under Al-Ameen Islamic Income Payment Plan will be in the Sub-Fund(s) of the AIIPP. The sub funds of AIIPP will be investing in equity securities and also in fixed income securities including deposits with approved banks. Such investments are subject to varying degree of risks that

include but are not limited to:

- a. Business Risk: This is the uncertainty of income flows caused by the nature of a firm's business. It includes:
 - i. Change in business cycles affecting the business of the company in which the investment is made;
 - ii. Change in business circumstances of the company, its business sector, industry and/or the economy in general; and
 - iii. Mismanagement of the invested company, third party liability through class action or occurrence of other events such as strikes, fraud etc., in the company in which the investment was made.
- b. Equity Risk: Investment in equity securities are subject to price risk, which is dependent on a multiple of factors, including the profitability/ performance of investee companies, technological development, which may render the processes of investee companies obsolete, Government regulations, economic and political situation within the country, region and internationally. As a result of these factors, the dividend income and the share price of equity securities may go up as well as down
- c. Volatility in Market Price Risk: Volatility in prices resulting from their dependence on market sentiment, speculative activity, supply and demand for the securities and liquidity in the market. The volatility in securities prices results in volatility in the NAV based price of the Unit.
- d. Liquidity Risk: Some securities listed at the Stock Exchanges are illiquid and difficult to sell. Liquidity Risk is the uncertainty introduced by the secondary market for an investment and assesses: 1) How long it takes to convert the investment into cash? 2) How certain is the price to be received? It is effected by:
 - i. Volatility in shares prices resulting from their dependence on market sentiment, speculative activity, supply and demand for the shares and the liquidity in the market; and
 - ii. Increase in lending rates as a result of a change in the supply and demand of liquidity in the market or on account of an increase of the underlying inflation rate.
- e. Credit Risk: These include default risk, credit spread risk, and down grade risk. These risks are associated with fixed income securities. Default risk will involve possibility of non-payment of mark up or principal. Credit spread risk will involve increase in difference of mark-up rate of an issuer and Government Securities. Such increase is due to macro-economic factors in local as well as global markets. Increase in spread will result in decrease in value of fixed income securities. Down grade risk means lower rating by credit rating agencies and will result in decrease in value of fixed income securities.

- f. Financial Leverage Risk: This is the uncertainty introduced by the method by which the firm finances its investments. If a firm borrows money to finance investments, it must pay fixed financing charges (in the form of interest to creditors) prior to providing income to the common stockholders. It includes:
 - i. Senior rights of creditors over shareholders of the company in the event of winding up
 - ii. The inability of the issuer of the instrument, the relevant financial institution or the counter party in the case of reverse repurchase or other arrangements to fulfill their obligations; and
 - iii. The possibility of defaults by investors or failure of stock exchanges, the depositories, the settlement or clearing system.
- g. Interest Rate Risk: This arises due to increase in lending rates as a result of a change in the supply and demand of liquidity in the market or on account of an increase in the underlying inflation rate. An increase in the interest rates will result in decrease in value of fixed income securities, including Government Securities
- h. Country or Political Risk: This is the uncertainty of returns caused by the possibility of a major change in the political or economic environment of the country such as break down of law and order, war, natural disasters, etc. and any governmental actions, legislative changes or court orders restraining payment of principal or income.
- i. Purchasing Power Risk: This is the risk of loss in the value of capital due to inflation.
- j. Inflation Risk: This is the possibility that the value of assets or income will decrease as inflation shrinks the purchasing power of a currency. Inflation causes money to decrease in value at some rate, and does so whether the money is invested or not. It is the risk associated with the return from an investment not covering the loss in purchasing power caused by inflation.
- k. Investor(s) enjoying Insurance / Takaful, under this Plan, in case of bankruptcy / default of the Insurance / Takaful Company, may face risk of default by the Insurance / Takaful Company in honoring its obligations under the terms and conditions stated herein. In such an event, any (Insurance / Takaful) benefit payable to the Investor will be dealt with in accordance with the terms and conditions imposed by competent authority on the Insurance / Takaful Company. The Management Company, the Trustee and the underlying Fund shall not be held liable for honoring any such claims of investor(s).
- l. The terms and conditions of Insurance / Takaful may change or the free value-added services be discontinued in the future. Investor(s) should make investment decisions based on the objectives of AIIPP and not on the free value-added features.
